

1. Check Positive Number:

- Task: Create a flowchart to check whether a number is positive.
- Next Step: Write a Java program that checks if a predefined number is positive using an if-else statement and prints the appropriate message.

2. Check Negative Number:

- Task: Create a flowchart to check whether a number is negative.
- Next Step: Write a Java program that checks if a predefined number is negative using an if-else statement and displays the result.

3. Check Odd or Even Number:

- Task: Create a flowchart to determine whether a number is odd or even.
- Next Step: Write a Java program that checks if a predefined number is odd or even. Use an if-else statement and the modulus operator (%) to determine whether the number is divisible by 2 or not.

4. Display Good Morning Message Based on Time:

- Task: Create a flowchart to display a "Good Morning" message based on a given time.
- Next Step: Write a Java program that displays a "Good Morning" message if the predefined time is between 5 AM and 12 PM. Use an if statement to implement the logic.

5. Print Area of a Square:

- Task: Create a flowchart to calculate and print the area of a square.
- Next Step: Write a Java program that calculates the area of a square using the formula $\text{area} = \text{side} * \text{side}$. Use a predefined side length.

6. Print Area of a Rectangle:

- Task: Create a flowchart to calculate and print the area of a rectangle.
- Next Step: Write a Java program that calculates the area of a rectangle using the formula $\text{area} = \text{length} * \text{width}$. Use predefined values for length and width

7. Find the Largest of Three Numbers:

- Task: Create a flowchart to find the largest of three numbers.
- Next Step: Write a Java program that finds and prints the largest of three predefined numbers using if-else statements.
